

# Turnkey Vision

## Turnkey Vision Solutions

Wineman Technology, Incorporated, industry leader in the design and build of specialty machines and custom data acquisition software and systems, is also a leader in the development and deployment of cutting edge vision inspection systems. Our existing systems are deployed in the field on high volume production inspection applications. Our applications have proven that sophisticated systems can be deployed for the inspection of complex parts; yet provide the operator with easy to use and intuitive user interface screens.

WTI's engineers have demonstrated a solid understanding of the fundamental and advanced development techniques involved in the design, development, and implementation of vision inspection equipment.

Our staff of experienced engineers is available to provide consulting services, hardware, software, development, feasibility studies, and complete systems to meet your requirements. In addition, our mechanical and controls engineering departments can provide the required expertise to modify existing equipment, design a turnkey stand-alone system, or design a piece of equipment that can be integrated into your existing equipment.

## Capabilities

- Robot Integration
- Complete Turnkey Solutions
- Complete Automation
- 3D Part Mapping
- On-site Part Evaluation
- Dimensional Tolerancing
- Stand-Alone Inspection Systems
- Solutions Integrated into Existing Production Lines
- Camera and Lighting Alignment Utilities

## Features

- Non-Proprietary
- Open Architecture
- Off the Shelf Hardware
- Scalable
- Cost Effective
- Multi-Vendor Solutions
