Alternative Energy & Energy
Test Systems

From components used in the manufacture of wind turbines to solar energy solutions and from hybrid technologies to traditional gas and oil; Wineman Technology, Inc. is partnering with manufacturers to provide test, data acquisition, and control systems throughout all stages of product development and manufacture. WTI is an award winning high tech engineering firm focused on developing world class automated test equipment, control systems, and data monitoring for applications in research & development, laboratory, & final production.

We Provide:
Specialty machines, complete systems integration, automated test systems, machinery and controls modernization, and software application development. We have extensive expertise in all versions of LabVIEW™ including RT, FPGA, Embedded and TestStand™.

Industry Experience:

Applications Include:
- Pumps/Motors
- Accumulators
- Bearings
- Turbines
- Structural Fatigue
- Electronic Control Modules
- Gearboxes
- Generators
- Drives
- Actuators/Valves
- Hoses/Tubing
- Compressors
- Batteries
- Clutches
- Transmissions
- Solar Panels
- Fuel Cells
- Heat Exchangers
